

Technical Task: Jobseeker Registration & Profile View Module

Objective:

Build a simple **Jobseeker Registration Form** with profile view functionality that stores data in a database and allows recruiters to view jobseeker profiles in a list and detail format.

✓ 1. Jobseeker Registration Form

- Fields:
 - Full Name
 - Contact Number
 - Email
 - Gender
 - Age
 - Skill/Trade (dropdown)
 - Years of Experience
 - Preferred Job Location
 - Upload Resume (PDF)
- Basic form validations (required fields, email format, etc.)
- Save to database

✓ 2. Profile List View (Recruiter View)

- Display list of jobseekers in a table:
 - Name, Skill, Experience, Location, Status
- Add search/filter by:
 - Name
 - Skill

- Experience
- Location

✓ 3. Jobseeker Detail View

- On clicking a jobseeker from the list, show:
 - Full profile information
 - Download link for Resume

Tech Stack

- **Frontend:** React or Next.js + TailwindCSS
- **Backend:** Node.js + Express
- **Database:** MySQL or MongoDB (based on existing setup)
- **File Upload:** Local or AWS S3 (optional for now – local recommended for this task)

Roles & Access (Basic)

- No login needed for this task – assume static access for testing
- Recruiter can access the list and view profiles
